## Managing your email settings

Our emails are designed to keep you updated about what's happening in your personal network on ResearchGate. They also inform you when other researchers take an active interest in your publications or respond to a question you've asked.

Follow these steps to customize your emails:

1. Go to your [Email settings](#)
2. Check the boxes next to the emails you want to receive.

**Note:** If you unsubscribe from all emails, you may still receive reset emails when you forget your password. You may also receive other administrative communications, such as an email notification when your RG Score is activated (this occurs only once).

## Why am I still receiving emails after I clicked 'unsubscribe' in an email?

Clicking on **unsubscribe** in an email will only unsubscribe you from **that particular email type**. If you want to unsubscribe from other types of emails, you must log in to ResearchGate and follow these steps:

1. Go to your [Email settings](#)
2. Unsubscribe from all email types or email categories that aren't relevant to you by unchecking the relevant boxes.

**Please note:** If you are logged in to ResearchGate, you will automatically be redirected to your [Email settings](#) to make further changes. If you aren't logged in, you'll need to log in before making any changes.

## Changing your login email address

It is possible to use a deactivated email address to log into your ResearchGate account as long as you can remember the password. This is how you can change the email address associated with your ResearchGate account:

1. Log in to ResearchGate using your current login email address
2.  Click the arrow at the top right-hand side of any page
3. Click **Settings**
4. Under **Email address**, click **Add additional email**
5. Type in the email address you want to use as your login
6. Enter your password and click **Add**
7. A confirmation email will be sent to your new email address. Click the link in this email to complete the verification process. If you encounter an error message "Oops! We couldn't find that token in our database", please make sure you are using the link in the latest email, as all previous links are invalidated. Check your spam folder and filters if you can't find any others.
8. Then go back to your [Account Settings](#)
9. Click the **Set as primary** button next to the email address you've just added to make it the primary email address for your ResearchGate account.

**Please remember** – This is the email address you'll use when you next log in to ResearchGate.

## Can I use multiple email addresses on ResearchGate?

Yes! Once you've signed up with your institutional email address you can add an additional email. You can do this by going to your [Account Settings](#) page and following the steps above.

## Why am I receiving emails from [researchgatemail.net](#)?

We send you notification emails from [researchgatemail.net](#) and [researchgate.net](#). If you receive ResearchGate emails from any other address, don't open the email or click on any links.

## ResearchGate is having problems sending me emails

If you have not been able to receive emails from us for a prolonged period of time, we now require that you add a working alternative email address to your account. The only way to access your account is to provide a new email address at which you can be reached.

## Not receiving the email confirmation?

If you haven't received your email confirmation within 24 hours you can try the following options:

- Make sure the email did not end up in your junk mail folder.
- Some email clients have an automatic filtering option where emails can be sent to different types of folders and are easily hidden.
- Add ResearchGate to your address book. [Find out more](#).
- Contact your email administrator to ensure all emails from [@researchgate.net](mailto:@researchgate.net) or [@researchgatemail.net](mailto:@researchgatemail.net) can be received. For more information on how to do this, see [Managing your email settings](#).
- Once you've tried **all** of the above options, you can request another activation email here: [Contact us](#). Under **What would you like to contact us about?** select the option **I would like to receive the account activation email again**. Please fill in your email address, and click **Send activation email**. You should receive a new activation email within 5 minutes. If you have requested the confirmation email multiple times, please note only the latest link will be active.
- If you've tried **all** of these options and still haven't received the email, please [Contact us](#).

## Receiving emails

To keep receiving important updates and emails from us, please add [no-reply@researchgatemail.net](mailto:no-reply@researchgatemail.net) to your safe senders list or whitelist. [Learn more](#)

If you don't want to receive certain updates from us anymore, you can [edit your email settings](#).

## I don't have access to my email address, and I've forgotten my password

For security reasons, we are **unable** to give you access to your account if you cannot remember your **password** and also do not have access to your **email address**. If you are unable to access the email address you signed up with, we kindly ask that you sign up again with an active email address.

Once you have signed up successfully again, if you know the login emails for both your old and new accounts, you can merge them quickly and easily. Merging allows you to transfer all your publications (and related data, such as citations and reads) from your old account to the new account. Your followers, followings, projects and questions cannot be transferred. The old account will then be removed.

**Please note:** You can only keep an account that you are currently able to access.

Here's how to merge your accounts:

1. Log in to your new ResearchGate account
2. Visit the profile page of your old account
3. On the Experience tab of your old profile, select the Report profile button
4. In the pop-up window, select Report duplicate
5. Enter the email addresses associated with both of your accounts and select Save.

Your request to merge your accounts will be reviewed and you will receive an email confirmation from us when the merge has been completed.

If you cannot recall both of your login emails, please [Contact us](#) for further assistance.

## The link in my email doesn't work

Links in emails can often be blocked by the security settings of your email client, such as Outlook or Apple Mail. Normally, there is an option at the top of the email to allow links or pictures from this address. If there isn't, there is most likely a security setting that must be changed in your email client.

We also suggest that you add ResearchGate to your address book, which would prevent this from happening in the future. You can find out how to do this here: <https://www.researchgate.net/application.EmailInstructions.html>

As a workaround, you can also forward the email to any other email account you own which is not experiencing this issue, and click on the link there.
